METRO/METRO FALA
*Simple, classic - the well proven
drop arm awning.*

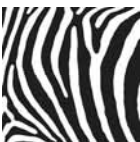

METRO and METRO-FALA drop-arm awnings offer the ideal solution for providing shade for windows and balconies. The sloping cover allows an unobstructed view of the outside and good air circulation when the window is open.

The projection angle is freely adjustable between 0° and 170°. This provides the ideal combination of sun protection and daylight. The lateral aluminium drop arms with integrated spring elements guarantee perfect tensioning of the cover and prevent it flapping in windy conditions. The METRO model is supplied without protection box. Both models allow easy wall or top installation.

Operation is by a smooth running bevel gear or an optional electric motor.

Enjoy double the benefits with METRO drop-arm awnings with relaxing shade and a clear view outside.

eürofürst

METRO-BOX

All-round protection - perfect for facades, conservatories and balconies.

The sun is shining and you don't want completely lose the daylight and the view from the window. - The METRO-BOX drop-arm awning is the answer.

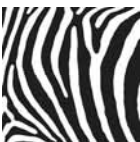

The sloping cover provides pleasant and flexible shade. Its solid construction is perfectly suited for installation in window recesses, on balconies or as vertical shading in conservatories. The compact protective casing shelters the rolled-up cover against dirt and the weather. The lateral aluminium drop arms with integrated spring elements guarantee perfect tensioning of the fabric in every projection position from 0° to 155°.

Whether operated by gear and crank or optional electric motor the METRO-BOX provides perfect protection

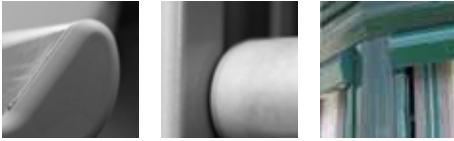

*For a cool interior and unobstructed view of the outside.
Keep control of room temperature day or night.*

METRO-LIGHT

Elegant shading for facades with windproof projection arms.

The coordination of daylight and shade is child's play with the METRO-LIGHT.

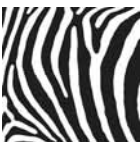

The mix of vertical and combination awning plus an stepless adjustable projection angle of 0° to 180° ensures that this system provides maximum shade even with large window surfaces. Architects value the harmonious design of the METRO-LIGHT and use it often as a design feature in facades for modern residential or commercial properties. The tensioned projection arms are protected against wind in any position and are automatically locked at the maximum projection angle.

It is operated by gear box and crank or optional with an electric motor. Control systems and additional comfort options are available.

*Preserve your privacy and protect yourself against the wind and low sun.
The flexible privacy blinds can be fitted in an instant.*

Awning accessories and options

Colours

Powdercoating elements are implemented more often with façade design in current architecture.

As the leading awning manufacturer we have been using this environment friendly and high quality finishing technology, which provides durable protection, for years. Whether RAL, NCS or various special colours from our TOP TEN palette, the colour selection is almost limitless.

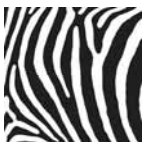

Automation

We offer you exactly the comfort that you want from your individual awning system, from simple wind sensors to complex centralised air-conditioning. Regardless of whether you extend an awning via remote control, turn on atmospheric lighting or you want to control the façade and conservatory awning system in groups: our reliable automatic systems master any situation.

Material

Play of colours and UV protection...

The colour selection of an awning cover influences the play of light and shade in the same manner as the perception of the environment. All awning covers are tested according to strict norms. They provide a high UV protection factor and filter at least 90% of UV rays. - Let our cover collection inspire you.
