STOBAG - Premium Swiss Quality

Stay cool in the shade

Shade means quality of life.

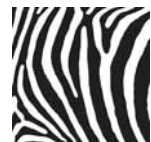

Your increasing demand for convenience, functionality and design has motivated us time and again to develop innovative solutions - and this since 1964.

Whether for balconies or terraces, conservatories or facades - as the leading Swiss manufacturer, STOBAG offers a wide range of individual awning systems to suit all requirements.

Your shade oasis can be comfortably expanded and automated through cleverly devised comfort options.

Plunge into the inspired world of colours and forms. Experience the fantastic symbiosis of quality, technology and design.

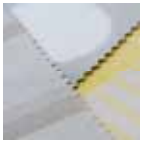

Quality and safety

We guarantee you durable products in uncompromising quality. We achieve this through the consistent use of high quality materials, modern and environmentally sustainable production processes as well as continuous safety inspections.

Functionality & Technology

Our many years of experience and close cooperation with specialists, architects and planners enable us to develop innovative products that meet the highest demands.- yesterday, today and tomorrow.

Aesthetics & design

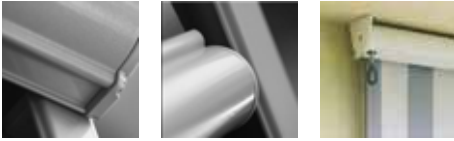

Emotions turn our daily routine into an adventure. The influence of colours and forms play a central role in this. Therefore STOBAG awnings are customised for you. Select from over 350 cover designs and countless frame colours and you can achieve the perfect harmony between architecture and environment

UNIVERSAL

Attractive facade screening in harmony with building architecture.

The UNIVERSAL vertical awning models, with three different lateral guides, do credit to their name. The choice between aluminium guide rails, stainless steel wires and chrome steel rod guides offers architects a wide range of options.

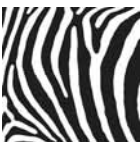

Compact construction and an elegant box make this suitable for balconies and conservatories as well as serving as a design element in modern facade architecture. UNIVERSAL awnings can be installed on walls or ceilings. Both models use the same technology.

The awnings are operated either by a gear and crank-handle or an optional electric motor. Several awnings can be linked together. The wide choice of fabrics provides the right choice for every application.

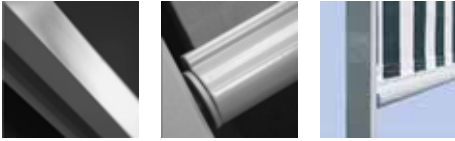

The versatile solution for protection against the sun and prying eyes that ensures a comfortable room temperature and protects your privacy.

eürofürst

VERTICAL/VERTICAL-BOX/ VERTICAL-LIGHT

Classic and modern - the right solution for every facade.

The VERTICAL range represents the classical vertical awning. The basic model of the three is the VERTICAL S4110, supplied without protection box. It can be mounted on ceilings or walls.

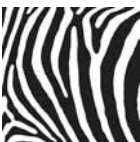

The VERTICAL LIGHT model has an elegant, rounded protective box. The box is held by guide rails and is therefore self-supporting. Installation may be recessed into a niche or positioned on the facade.

Do you need a square protective box? The VERTICAL BOX has one. Apart from that, it is the same awning as the VERTICAL LIGHT. On all three models, fabric tension is provided by the weight of the front rail, to which extra weight can be added on the VERTICAL LIGHT. Operated by crank-handle or optional electric motor.

*The proven vertical awning for medium to large window surfaces.
Available in round or square design – according to your individual taste.*

VENTOSOL

Withstands even the hardest conditions.

VENTOSOL stands for modern and solid shading for facades and has a wide range of uses. The SIR System™ (Soft Integrated Retaining System), which works like a zip, guarantees maximum stability of the internal fabric guidance system. VENTOSOL awnings withstand strong winds (120 km/h*).

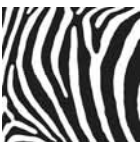

The elegant, slightly rounded box of the VENTOSOL awning is self-supporting. Various fixing options allow the structure to be fixed to walls or in recesses. Operated by crank handle or optional electric motor. The VS5400 model is fitted with a counterweight system and motor drive as standard and can also be installed horizontally if required.

* wind tunnel tested 220x200cm

*Protects against sunlight, wind, insects and prying eyes.
The perfect facade awning with the ingenious fabric guidance system.*

eürofürst

VERIMATIC

Provides for ideal distribution of natural light.

The VERIMATIC VS1000 is a special kind of facade awning that can be operated either top-to-bottom or bottom-to-top. This model offers significant advantages in offices and training rooms. This guarantees natural light reaching into every corner of the room.

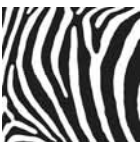

The fabric is kept taut in any position by the patented counterweight technology integrated in the guide rails. With its elegant lines, the VERIMATIC is an ideal design element for impressive business premises. The powder-coated cast parts and aluminium profiles guarantee long-term quality.

With a motor fitted as standard and the appropriate optional controls, it is easy to provide shading for the whole front of a building.

*From bottom to top – the smart shading option with the perfectly tensioned fabric.
Enables best possible lighting of buildings with canopies.*

Awning accessories and options

Colours

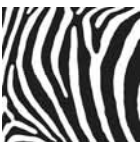

Powdercoating elements are implemented more often with façade design in current architecture.

As the leading awning manufacturer we have been using this environment friendly and high quality finishing technology, which provides durable protection, for years. Whether RAL, NCS or various special colours from our TOP TEN palette, the colour selection is almost limitless.

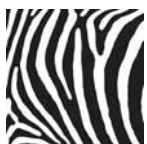

Automation

We offer you exactly the comfort that you want from your individual awning system, from simple wind sensors to complex centralised air-conditioning. Regardless of whether you extend an awning via remote control, turn on atmospheric lighting or you want to control the façade and conservatory awning system in groups: our reliable automatic systems master any situation.

Awning accessories and options

Material

Play of colours and UV protection...

The colour selection of an awning cover influences the play of light and shade in the same manner as the perception of the environment. All awning covers are tested according to strict norms. They provide a high UV protection factor and filter at least 90% of UV rays. - Let our cover collection inspire you.

We offer the ideal solution to any demand with three manufacturing processes,

Sewing, polyester thread can be used for all acrylic fabrics and is also very suitable for waterproof fabrics. TENARA thread, which is available as an option, has an especially high resistance to the weather and to the sun's radiation.

Gluing, is supplied as a tape and is activated in the seams ultrasonically. The advantages of this are: improved homogeneous appearance; fully sealed seams with no water penetration; no damage to the seams from environmental and mechanical influences; optimal distribution of stress throughout the seam area through full surface glued contact.

Welding. Is a proven process which provides ideal seam contact with PVC fabrics.

Large awning areas are also ideal for advertising by means of refined printing techniques.
